## **DETAILED ACTION**

This action is responsive to applicants' request for continued examination received October 6, 2005. Claims 18-23 are currently pending.

## Claim Rejections - 35 USC § 103

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 18-23 are rejected under 35 U.S.C. 103(a) as being unpatentable over Smith et al, US 5,746,776 in view of Siklosi et al, US 5,547,476.

Smith et al teach a dry cleaning kit for in-dryer use comprising a containment bag containing an interior surface which is impregnated with an effective amount of a dry cleaning composition (see abstract). The bag may have multiple layers, the outermost being a vapor impermeable barrier and the inner layers having the dry cleaning composition absorbed thereto (col. 10, claim 1). The dry cleaning compositions comprise as much as 95% water, as much as 32% organic solvent, and as little as 1% nonionic surfactant (col. 10, claims 1-3). Suitable organic solvents of the invention include C2-C4 diols and ethylene glycol (col. 5, lines 51-60). It would have been obvious to one of ordinary skill in the art to use a diol or ethylene glycol as the organic solvent in the dry cleaning compositions of Smith et al as such solvents are taught as preferred in their compositions.

Application/Control Number: 09/763,049

Art Unit: 1751

Smith et al do not specifically teach properties such as substrate surface area and amount of composition absorbed on the substrate. Siklosi et al teach a dryer sheet impregnated with solvents and water for use in a containment bag dry cleaning process (see abstract). The dryer sheet contains an absorbent core enveloped within a lint resistant fabric (col. 6, lines 15-20). The dryer sheet has a surface are of 625 square centimeters and is impregnated with 23 grams of a solvent/water/surfactant composition (col. 7, lines 55-65). Note that the dryer sheets may be composed of hydroentangled fabric (col. 9, lines 20-21).

Page 3

Based on the teachings of Siklosi et al, it would have been obvious to one of ordinary skill in the art to use a dryer sheet with the dimensions and amount of composition taught by Siklosi et al in the dry cleaning process of Smith et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles I. Boyer whose telephone number is 571 272 1311. The examiner can normally be reached on M-F 9:30 to 6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Yogendra Gupta can be reached on 571 272 1316. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
